Rhodes DxOp provides data analytics by harvesting lab results and applying advanced algorithms to identify critical healthcare needs. DxOp greatly enhances care coordination activities to ensure patient care gaps are closed. It also improves health systems and medical groups’ quality metrics.

Laboratory results account for merely 3% of annual HEALTHCARE spending but play an INTEGRAL role in the lives of PATIENTS because they INFLUENCE most healthcare decisions. DXOP enables laboratories to participate in disease management and VALUE-BASED initiatives by providing near real-time ACTIONABLE information on patients at risk for complications and/or have care gaps.
